Troubleshooting

If for some reason the file automatically opens in a new browser window....Right click and select SAVE TARGET AS, or SAVE LINK AS. Then your files will download to where you specify. If you're not sure where to place the file, save it to your desktop so as to find it easily.

For information on how to import the files into your media player program, you will need to refer to your help guide for that program or contact that company help line (i.e., iTunes, Windows Media, Creative, etc.).

But it is very simple "select all the music/sound files in the folder, right click them to copy them and drag all the music files into your preferred player."
